Audio – Clearone, Revolabs, Sennheiser

Control – AMX

Key solutions

- Multi-function, divisible Training Room
- Adaptive Video Meeting Rooms
- Control & Audio Programming
- Custom-designed movable VC Camera Stand

When a major UK based investment bank realized their existing meeting rooms could not keep up with audiovisual needs, Vega was approached to provide a complete audiovisual upgrade and expansion package for a training room and two video conference rooms. Working closely with the designers and the bank's facilities management, Vega carefully designed and integrated the new AV package around the already existing systems.

The newly implemented facilities include full high definition video and audio conference functionality. The divisible training room is also equipped with portable front and ceiling cameras, retractable ceiling projectors, LED TV displays, wireless microphone, and an AV integrated lectern. The training room's custom-designed mobile front camera stands allows for unrestricted flexibility in camera placement.

The rooms' audio processing abilities were also expanded and professionally tuned to eliminate audio feedback and to ensure the best microphone performance. Complementing the AV improvements is an upgraded control infrastructure reprogrammed by Vega to control everything from room lighting to video conference dialing.

By repurposing existing equipment wherever possible and implementing custom-designed solutions tailored to the client's needs, Vega delivered a complete, value-added solution at the lowest costs possible.
